

UnitedHealthcare

Value-Based Care Agreement — Medicare Advantage Quality Agreement

1. Contract Overview

This agreement is entered into between **UnitedHealthcare** (hereinafter 'Payer') and the participating health system (hereinafter 'Provider') for the contract period **January 1, 2025 — December 31, 2025**. This contract covers an attributed patient population of approximately **8,500** members. The agreement operates under a **Two-Sided Risk** risk arrangement. The total shared savings opportunity is estimated at **\$3,200,000** annually.

2. Risk Arrangement

Under this Two-Sided Risk arrangement: If Provider meets or exceeds the aggregate quality benchmark, Provider shall receive **60%** of realized shared savings. If Provider fails to meet the minimum quality threshold, Provider shall be responsible for **40%** of excess costs, capped at **\$800,000**.

3. Quality Performance Metrics

Provider performance shall be evaluated based on the following quality metrics. Each metric contributes to the overall Star Rating calculation as specified by the assigned weight. The target overall Star Rating for this contract is **4.0 Stars**.

Metric ID	Metric Name	Description	Target	Weight
QM-01	Diabetes: A1C Control	Percentage of patients with diabetes (age 18-75) whose most recent A1C is $\geq 9.0\%$ (lower is better)	$\leq 16\%$	3x
QM-02	Hypertension: Blood Pressure Control	Percentage of patients with hypertension (age 18-85) whose most recent BP is $< 140/90$ mmHg	$\geq 72\%$	3x
QM-03	Colorectal Cancer Screening	Percentage of patients (age 45-75) with appropriate colorectal cancer screening	$\geq 65\%$	2x
QM-04	Breast Cancer Screening	Percentage of female patients (age 50-74) with a mammogram in the past 2 years	$\geq 70\%$	2x
QM-05	Kidney Health Evaluation (Diabetes)	Percentage of patients with diabetes who received a kidney health evaluation (eGFR + uACR) in the measurement year	$\geq 40\%$	1x
QM-06	Statin Therapy (Cardiovascular)	Percentage of patients with ASCVD who are prescribed statin therapy	$\geq 78\%$	1x
QM-07	Depression Screening & Follow-Up	Percentage of patients (age 12+) screened for depression with documented follow-up plan if positive	$\geq 55\%$	1x
QM-08	Medication Adherence (Diabetes)	Percentage of patients on diabetes medication with PDC $\geq 80\%$	$\geq 75\%$	2x

4. Star Rating Calculation Methodology

The overall quality score is calculated as the weighted sum of individual metric scores, normalized to a 5-point scale. Metrics designated with higher weights (2x or 3x) reflect priority areas identified by the Payer for this contract period. A minimum Star Rating of **3.5 Stars** is required to qualify for shared savings distribution. Ratings below **3.0 Stars** will trigger the downside risk provisions outlined in Section 2.

5. Payment Terms

Quality performance shall be evaluated on a quarterly basis. Shared savings distributions shall be made within 90 days of the end of each evaluation period. Provider shall submit quality metric data through the designated reporting portal no later than the 15th of each month following the reporting period.

6. Metric Definitions and Inclusion Criteria

QM-01 — Diabetes: A1C Control

Denominator: Patients aged 18-75 with a diagnosis of Type 1 or Type 2 diabetes (ICD-10: E10-E13) with at least two encounters in the measurement period. Numerator: Patients whose most recent A1C lab result is $\geq 9.0\%$. This is an inverse metric — a lower rate indicates better performance. Exclusions: Patients with gestational diabetes, patients in hospice care.

QM-02 — Hypertension: Blood Pressure Control

Denominator: Patients aged 18-85 with a diagnosis of essential hypertension (ICD-10: I10) with at least one encounter in the measurement period. Numerator: Patients whose most recent blood pressure reading is $< 140/90$ mmHg. Exclusions: Patients with end-stage renal disease, patients in hospice care, pregnant patients.

QM-03 — Colorectal Cancer Screening

Denominator: Patients aged 45-75 as of December 31 of the measurement year. Numerator: Patients with one or more of the following: fecal occult blood test (FOBT) within 12 months, FIT-DNA test within 3 years, flexible sigmoidoscopy within 5 years, colonoscopy within 10 years, or CT colonography within 5 years. Exclusions: Patients with colorectal cancer diagnosis, total colectomy.

QM-04 — Breast Cancer Screening

Denominator: Female patients aged 50-74 as of December 31 of the measurement year. Numerator: Patients with at least one mammogram performed within the 27 months prior to the end of the measurement period. Exclusions: Patients with bilateral mastectomy, patients in hospice care.

QM-05 — Kidney Health Evaluation (Diabetes)

Denominator: Patients aged 18-85 with a diagnosis of diabetes (ICD-10: E10-E13) and at least two encounters in the measurement period. Numerator: Patients who received both an estimated glomerular filtration rate (eGFR) test and a urine albumin-to-creatinine ratio (uACR) test during the measurement year. Exclusions: Patients in hospice care, patients on dialysis.

QM-06 — Statin Therapy (Cardiovascular)

Denominator: Patients aged 21 and older with a clinical diagnosis of atherosclerotic cardiovascular disease (ASCVD). Numerator: Patients who were prescribed or are currently taking any statin medication. Exclusions: Patients with statin-related adverse effects documented, patients in hospice care, patients with hepatic disease.

QM-07 — Depression Screening & Follow-Up

Denominator: Patients aged 12 and older with at least one encounter during the measurement period. Numerator: Patients who were screened for depression using a standardized tool (PHQ-2 or PHQ-9) and, if screening was positive, had a documented follow-up plan. Exclusions: Patients with an active diagnosis of depression or bipolar disorder at the time of screening.

QM-08 — Medication Adherence (Diabetes)

Denominator: Patients aged 18 and older with at least two fills of a diabetes medication (non-insulin) during the measurement year. Numerator: Patients with a Proportion of Days Covered (PDC) of 80% or greater for their diabetes medications. Exclusions: Patients using insulin only, patients with less than two prescription fills.

CONFIDENTIAL — For authorized use only.
